EXPERIENCE

Equal Identity (MoneyOne)

Dec 2024 – Present

Software Engineer

Hyderabad, India

- Built a **company-wide agent harness** on **Claude (Schedules, Agents, Skills)** serving engineering, sales, growth, and product: grounded in company and codebase context, debugging tools wired in, reachable from **Slack and Jira**, human-gated before writes; **~300 runs/week**, **87% adoption org-wide**, and **cut turnaround time across 90% of support mail threads**.
- Shipped the **Bulk Orchestration System**, a **Go** workflow engine on the critical path for bulk operations at **~2M records/day**, where new business flows compose from shared steps **without new service code**; **INR 200–300M projected at 10–15% market penetration**.
- Built **Nexus**, a queue-based notification router and the platform's **first multi-tenant layer**; scaled from launch to **~18M FI notifications/month** with **zero drops**, ending transaction drop-offs caused by missed deliveries.
- Spearheaded **Customer Protect**, automated detection-and-correction of malformed Account Aggregator consent templates; **~100 upstream fixes/month** guard **25–30M downstream consent requests**, **cut consent failures >20%**, and went **mandatory for every enterprise customer on the platform**.
- Architected **Multi CR Support** + migration pipeline to unlock client-switches from incumbent TSPs; ported **2M in-flight consents** for a top Indian discount broker with **zero rollbacks**, moving **INR 4M MRR**.
- Built API-level **observability from zero**; carried **4 on-call rotations**, resolved **8 highest-priority incidents**, and mentored an intern to production release.

Yelow Payments Private Limited

May 2024 – Nov 2024

Founding Engineer

Remote

- Engineered a business rule engine (**DRF** + Rust-based **Gorules**) evaluating underwriting policy in **<50ms** without redeloys; **disbursed INR 20M in loans within 10 days of launch**.
- Designed a **configurable workflow + BFF system** as the flagship lending gateway; added new lender journeys via **configuration, not code**, behind a uniform consumer surface.

SayF (Wealides Fintech Pvt Ltd)

Oct 2021 – May 2024

Founding Engineer

Remote (Bangalore-based)

- Built the consumer-rewards backend from scratch (**DRF** + **NestJS**) for a **Titan-Capital-backed B2C** savings app, owning the digital gold wallet, Auto-Save engine, and Smart Referral system.
- Scaled the platform to **120K users** and **INR 1B+ transaction value** across a **200+ brand** affiliate engine, holding **~3K req/min peak** on AWS ECS, RDS + PostgreSQL.

PROJECTS

Flowstate: On-device macOS dictation app | Swift, CoreML, Accessibility API

2026

- Built real-time **on-device** speech-to-text (no cloud, no audio leaves the machine) using NVIDIA **Parakeet TDT** and OpenAI **Whisper** in CoreML with Silero VAD, daemon-streamed so transcription overlaps speech, holding **~200–350ms from speech to fully punctuated text**.
- Engineered **fidelity-preserving** formatting (local LLM only for list boundaries, every item verified as a **verbatim substring**) and **fix-in-place** editing via the Accessibility API; one command ships a signed Sparkle appcast with **binary delta updates**, DMG, and Homebrew cask.

TECHNICAL SKILLS

Languages: Go, Python, TypeScript, Swift, SQL

AI & Agents: Agent orchestration (tool use, retrieval, human-in-the-loop gating), evals; Anthropic + OpenAI SDKs; on-device ML (CoreML)

Backend: Django + DRF, NestJS, Next.js / React; REST + BFF patterns, queue-based async processing, multi-tenancy

Infra, Data & Ops: AWS (ECS, S3, RDS, Athena), Docker, Jenkins, GitHub Actions, PostgreSQL, Redis; observability instrumentation

AWARDS & RECOGNITION

Monthly Demo Award (×2), Equal / MoneyOne | **Winner, Smart India Hackathon 2022** (DRDO; felicitated by the Vice President of India), Team Lead | **Winner, UNESCO India-Africa Hackathon 2022**

EDUCATION

Bharati Vidyapeeth College of Engineering (University of Mumbai)

Jan 2020 – Jun 2024

Bachelor's in Computer Engineering, CGPA 9.1 / 10

Navi Mumbai, India
